Automated Security Telemetry Triage Report

Wazuh Alert Summary Report for KaliVMAAlert ID:

v5YQ5Z4BI6djg1VGlctnTimestamp: **2026-06-20T12:45:21.492Z**Severity Level: **7** (High)Agent: **KaliVM** (IP: **192.168.100.35**)

Alert Details

Rule Information

- Rule ID: **533**
- Description: *Listened ports status (netstat) changed (new port opened or closed).*
- Fired Times: **8** (Rule has triggered multiple times before)
- Groups: **ossec**

- Compliance References:
- PCI DSS: 10.2.7 , 10.6.1
- HIPAA: 164.312.b
- GDPR: IV_35.7.d
- NIST 800-53: AU.14 , AU.6
- TSC: CC6.8 , CC7.2 , CC7.3

Observed Changes

Current Listening Ports:

Protocol	Port	Process/Service
TCP	22	/usr/sbin/sshd
TCP6	22	/usr/sbin/sshd
TCP	5678	4862/docker-proxy
TCP6	5678	4869/docker-proxy
TCP	8080	5712/python3
TCP	42983	805/containerd

Previous Listening Ports:| Protocol | Port | Process/Service |

TCP	22	/usr/sbin/sshd
TCP6	22	/usr/sbin/sshd

	TCP		5678		4862/docker-proxy	
	TCP6		5678		4869/docker-proxy	
	TCP		8080		5712/python3	
	TCP		42983		805/containerd	

Key Change:

- Port 8080 was closed (no longer listening).
- No new ports were opened.

Analysis & Verdict

Assessment:

- **Port Closure:**The closure of Port 8080 (previously used by `python3`) is the primary change detected.
- **No Malicious Activity Detected:**The alert is not indicative of malicious activity but rather a configuration change (e.g., a service was stopped or reconfigured).
- **Legitimate Services:**All remaining ports (`22`, `5678`, `42983`) are associated with legitimate

services (SSH, Docker, containerd).

Recommendations:1. Investigate Port 8080 Closure:

- **Check if this was a planned change (e.g., service stop, firewall rule update).**
- **Verify if any critical services were affected.**

2. Monitor for Recurrence:

- **If this rule fires frequently, investigate for unauthorized port changes.**

3. Review Firewall Rules:

- **Ensure no unintended firewall modifications occurred.**

Verdict:  **Benign (No malicious activity detected. This is a**

legitimate port closure event.)

Next Steps

- **Acknowledge the alert in Wazuh to prevent further notifications for the same issue.**
- **Document the change in your security log for audit purposes.**
- **Set up a process to monitor unexpected port changes in the future.**
